Syntax - Chomsky

By Shomit Sirohi

Introduction (Second Extended Edit)

By Noam Chomsky

We went for diving it, as Americans often argue about literature – and it is a literary argument at the base of the whole process – I call base the footnote which reads

literary Latin Quarter type life which goes with A. The Future and B. Creative French Quranic arguments and C. Formalisms which fit Deterior and its culture of youth reductions actually.

I mean then the argument is actually about – literary life being found on a Linux Quarter and Kierkegaard in the

strong sense at work in educational lifestyles.

I also mean it is true. So just see the base with the first, second base and read the base levels as united to an architecture – organized three or four bases which then makes a structural argument – that there are three or four bases to touch – the gaming, the old people and the lovers + Sirohi.

All of this then is a Linux Quarter life of literary and cinematic referencing – and even a library to divine.

We mean that three bases then have complex formalisms deriving from them – like a set of parallel formalisms – like the visit to Damascus perhaps – or a visit to

Tel Aviv – such options people also access.

See it as a perfect plan to Cordoba with Averrosianism – it is just the process of philosophy now joining the literary festivity of what is eventually just – Tehzeeb but with Sirohi, the Prophet.

It seems like it draws this process out actually –

1. Bases (3, 4, maybe 5)
2. Organised Bases (Curated events around it)
3. Tehzeeb.

All of this then is how it is finally, thanks.

Introduction Extended by Sirohi

Deductive formalism in perfection by Chomsky of an linear model –

Deductive formalism below unfolding –

Base, Superstructure, Complex Notes, all like footnotes and added notes, like a notebook which then means

I. Organised formalism
II. Pure Format
III. Linear Model
IV. Pure Model

V. Models and Fashion as Sirohi’s life
VI. In that sense formatted company as a appendix with a library
VII. See this to mean that there is a company model and its derived format of culture in formal simplicity of Tehzeeb.

Introduction
By Noam Chomsky

And so we meet soon as
I meant for Deterior –
and meet in long waits
is not the case I argue,
but frequently – love the
faxing going on in fact
already with us – not
Sirohi – love the
messaging as well we
do when he is asleep.

It is just an intellectual world – I add Keynes is important if domestic capital is not allowed to manage all affairs.

I argue Sirohi is happy its Keynes in Europe – because he is free to be an American Idealist – his recent arguments on aesthetics as economics is true I also argue for America – that it is a film major country – we

are then about Hollywood as ISA of course – but also and in fact that is a traditional American financial process and manages culture as well in the guise of the opposite – film going to cultural forms of its trailers, promotion, rating, financial grossing and cultural weight and value – which includes an active process called Studio-System in

America – which keep listening to Sirohi for the best cinema arguments and love him for that – he has made America live forever with his artistic behaviour – the simple editing also helps – the Free Software comes of use that way – lot of films being made – love this.

Introduction

Future arguments on Deterior are –

1. Cinema viewing in Cannes
2. Psychoanalytic meetings
3. Philosophy Lecturing and Work Life with all
4. Parties perhaps a few
5. Creative lifestyles around Sirohi and travelling perhaps

6. Production of Bohemian Lover Latin Quarters with writers meetings

The company process itself as additions

1…1 A process of say software creativity – like talking on the computer and inventing a method of talking on the video call for instance by fax calls – how to fax each other

Faxing, printing, and buying paper – even this as Noam Chomsky’s idea of the best living argument of a intellectual connectivity.

Articulate such creativity with the following company process

_____

1. Basic Software

2. Arguments on Philosophy and theory on the Radio (High radio invention, with a Nokia)
3. Arguments on Sex, Sexuality and Women’s Education, Lovers of Sirohi, others also learning with philosophers or students and Parties, Communist mainly

4. Forms of Art Regimes and Situationism
5. Cinema, I-Max-I, paintings and curation
6. Curated meetings
7. App-world
8. Phone
9. Fundacion and Architectural Franciscanism
10. Theology and Classical Studies

This is the main process

1.1 Practices of Working on the Software, and the rest as practices of each.

2.2 Meditations now even on Paul, and such spiritual life and even processes of education

3.3 Psychoanalysis and talking regularly

All these are practices – even games and

reductions from time to time.

Second Part –

Research into literature, and cinema.

All together – let’s go to French Quran – a creative experience and even theological proximity to Kierkegaardianism – with even film, curation and games, even

creative conversations which are Tehzeeb.

All of this includes language classes and learning languages like Spanish or Greek.

Conclusion –

1.1,2 and 4, 8, 4.4, 8.1 – a complex progressive movement of philosophy, psychoanalysis of a trained educated

simplicity called philosophy with a tenor and melodic conversations and jokes – music, and cinema, even curated art and the computer and phone world – with a lot of games and television – even therefore the truth remaining French Quran – which adds that there is a creative process at work which is like fashion and fashion criticism and

artistic women included to lovers of Sirohi – and parties planned and Events managed – all of this is the simple meaning of daily life utopia for most people, in fact all, except politicians in Europe who are not following this life. They argue they want to quit and join Deterior.

Part II – An Essay on the Progressive Notation

1,1, complex movements to 12.1 with a non-logical convolute by structural linguistics

This articulated means also Ortega y Gasset, Hispania news, and forms of Walkman and Soviet technology, old IBMs to buy and forms of Michel Chion also available with a store on old ideas which now has Trisqueir Linux forms

and all of this means in fact cultural creativity at heights in a company meant to be private and public in more unique manners and supports a Hollywood culture with film being a major transaction through it.

The finance makes it to the world as a Facebook which is unique.

All of this then is simple in Marxism – that the

world of state, fiscal budgets and retail culture is their duty – the company works on social networking – this is called the style of a company which then contributes to society by it being mainstreamed to being a creative flow in it.

The problem of how companies and culture and world cities or national processes are

united is somehow related to Ortega y Gasset – a liberal arte curato which is about the liberal process of in fact contributing to society in liberal manners – and that is called liberal economics.

Imagine being told to run the whole of Spain – it is just not the company’s process – but it is mainstreamed into

it none-the-less – as a mainstream Deterior process which then creates a website following in a chilled out manner and it is just that.

Other companies do their mainstreaming – and this becomes the liberal mixed economics and is called by Unger the creative process as opposed to the state process – and is best

understood as in fact a mixed liberal economics – it has to be liberal because it has to respect the creativity of companies as their plan – and this creates a crisis in thinking economics – it is best called liberal economics – the opposition in say Cuba which needs state maximal processes or even Spain which also prefers a more

Keynesian economics
for this reason in fact.

Further Notes –

1…1..2 A process of
reflection on Jansenism,
Lucien Goldmann
studies even.

This derives many
Althusserian mansion
formalisms – which then
is about crossing out
this and writing in
aleatory materialism.

2…1 –2 A process of go games with Borges, already going on and even philosophical or literary conversations on Averroes, and the Birds, with Sirohi as well in humour.

2 ---1 Convolute from Structural Linguistics – numbers, and

letters, even GNU project –

This derives with a deduction from above of divine stuff on Deterior, that is accentuates the divine as sexual process with Sirohi and his lovers, many women he is even certain about now – but profound in a way –

This then becomes Parsi, and Parisiana –

which means to follow divine traditions like housing.

Complex formalisms tell me that numbers, letters and GNU project together means a literary life on Linux and how it plans a Kierkegaardianism for even Senegal – which means also Angola and even Namibia and South Africa – which then becomes a process of

black creative jazz writing which if joined to Communist Parties is about creative writing lessons in the future from Sirohi – he is also in fact Kierkegaardian about a cheap university in Delhi, called DU and in fact wants to follow it with philosophers and perhaps Communists and theological people.

This is all planned.

In this process – eventful things happen – like profound theological debate.

Complex notation in this –

Numbers, and letters with GNU is then American surrealism at the moment with Anna and Mischa -the process then is Sirohian

commentaries on developing this –

He means with the French Quran notation speaking lessons – he is also a linguistic speaker of many languages as is known and divines more.

Now imagine an essay –

1. Basic Essay in One Paragraph –

Deterior is a creative social networking company which then is about a creative life with formalisms mentioned above but also divine formalisms as well – like chess and philosophy and go compared to chess.

It also means imagining a aleatory materialism of a class of people.

Now I add to the essay how it sums up as Linux Quarter, Trisquier Linux and Linux Avenir – just the process we were looking for – a simple work life of literary and philosophical writing and messaging, faxing and conversations over say Borges, or Pope or even the divine Althusser.

Now articulate the first section – creative

formalisms with the second section divine formalisms – add the whole Greek and Arabic Gospel and Classical Studies with behaviour and even Spanish poetry, and French poetry.

It means then Ortega y Gasset divined further.

Now the vision of the company is –

2. Something like a company with

A. Creativity
B. Greek Bible and Gospel creativity and history
C. Intellectual and Philosophical Divine arguments

Now just re-phrase the whole letterly and numberly old crowd with Sirohi – a formalist

in the French Quran simple –

In simplicities – it is an old crowd of divine people and a young creative crowd with Soviet people and perhaps Sirohi and his lovers who are about Greek Swing and Metaphysics.

This is summed up as Linux Quarter culture eventually –

Like a Latin Quarters.

3 – 1 – 2 – 3 – Now the sequence goes back and forth in deduction and induction as it were

It is just a sequence of happy days for all – and even Argentine psychoanalysis and jokes on Sirohi planned – on how they will show

him their life at worst arguments and tell him about it and how he freed them.

Just develop the arguments –

A number of formalisms of creativity and inventions to aid this process in formalism of inventions

I. Reimann

II. Quantoff used often and highly precise
III. Types of art computers
IV. Types of black models of art contemplation
V. Rum and coke in bartending

Such in fact high life – that he is called a Prophet –

Conclusion –

Now just imagine literature as a process with French Quran simple – sometimes life becomes Edenic because Sirohi is discussing Quartega y Ziet – it is just then many formalisms of the square, triangle and circles with many Arabic Messianic formalisms resonating with it - like a simple Tehzeeb life finally.
